

Single Function Wing

Optional Mid-Mount

- Single Adjustable Spring Cushioned Push Arm with Safety Shear Pin
- Single Lever Control for Ease of Operation
- One Step Heel to Toe Placement for Safe Operation
- Quick Response Time for On the Go Lift and Lower
- One Piece 1/2" Moldboard Reinforcement Ribs
- Rear Push Mount Installed Above Frame for Increased Ground to Rear Mount Clearance
- Free Float to Follow Contour of Road or Shoulder
- No Additional Cab to Body Spacing Required for Rear Push Mount
- 100% Welded Moldboard

The Monroe Single Function Patrol Wing has single lever control for ease of operation. The single lever control provides all the necessary functions to raise and lower the wing for patrolling snow. The Single Function Wing when properly adjusted sets the heel of the wing in operation first, then the toe is positioned last. The mounting of this wing usually requires no modification to the exhaust system, no additional cab to body spacing, no drivetrain interference and a rear mount that is located above the frame for an unobstructed ground to frame clearance. The Monroe Single Function Wing will increase your plow clearing capacity, increase operator efficiency, and reduce equipment road mile usage.

One 4-way (double acting) valve is required to operate this unit • All moldboards are shotblasted and powder coated Urethane Orange
